JS - Day-02

## → Commenting:-

The set of statements which are skipping from the executions.

There are 2 ways :-

Single line - //

Multi line - /\* ..... \*/

## → Formatting the data in Javascript.

• working with html's, css's and images.  
All the html element should be enclosed in " " or ' ' of document. write ("`<p> my name is Anand </p>`");

↳ means if you want to use html elements to work, you have to write in " " or

if you want to show in multi lines then use backticks ` `.

## → Identifier(s) and Keyword(s)

- Identifiers:-
- ① Can't start with Numbers and can start with letters, (underscore) and \$.
  - ② Spaces are not allowed.
  - ③ They are Case Sensitive.

Def:-  
var className ;  
    ↓                ↓  
keyword.        Identifier

## Def. of Identifier:-

The name itself is saying that, the particular name is used to identify the particular value.

## Keyword:-

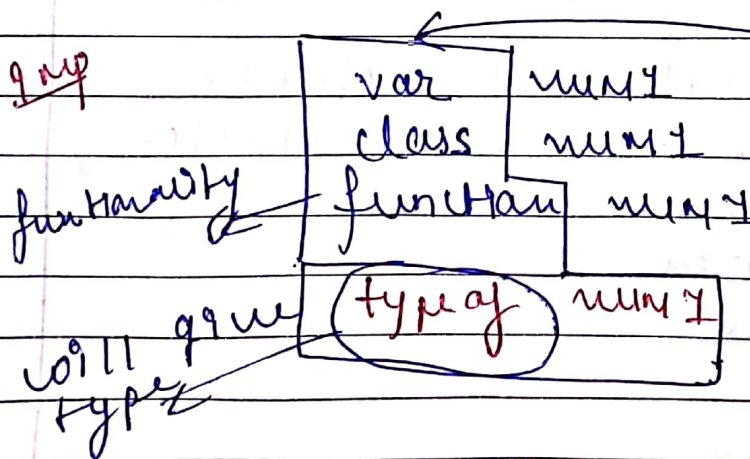

The term 'Keyword' (can also be called a 'Built-in' (or) 'Reserved' word).

eg. var, typeof, and, if, switch, async,

There are 3 ways to declare an Identifier. In Javascript.

- ① using var keyword
- ② " let "
- ③ " const "

These are used to save a value.

They are adding meaning to the many Identifier. Like .... what do you want to do with many.
